Abstract
The Saudi -Pakistani Relationships During the Period
1999-2009/

Nayed AL- Rasheidi
Mu'tah University,2010

This study aims at researching the principals and determinates of the Saudi -Pakistani relationships during the period (1999-2009), in the political, religious, economic and military aspects, in addition to the natural of these relationships.

By using the analytical, historical, and ideological methods in studying this relation between the two countries, it shows the followings: First; there are strong relationships between the two countries regarding all the ways, such as political, religious, economic since the establishment of the diplomatic relationships between the two countries. Second: there was a significant role of the religion in permanent and continuing the relationship between them. Third; the economic factor was the supporting element for the religious one and as a center and determent of the relationships between the two countries, in spite of the setbacks which threaten the relationships for a short time, as a result of the 11th of the September events. But after those events the relationships were improved after 2002.

Fourth, the cooperation factor between the two countries will be the likely one because of the strength of the religious tie and the common interests between each other.
